FEMA

What is IPAWS?

FEMA

Who can use it?

85% of the US population is covered by a local Alerting Authority!

Complete list:
[IPAWS Alerting Authorities - Agencies and Organizations | FEMA.gov](#)

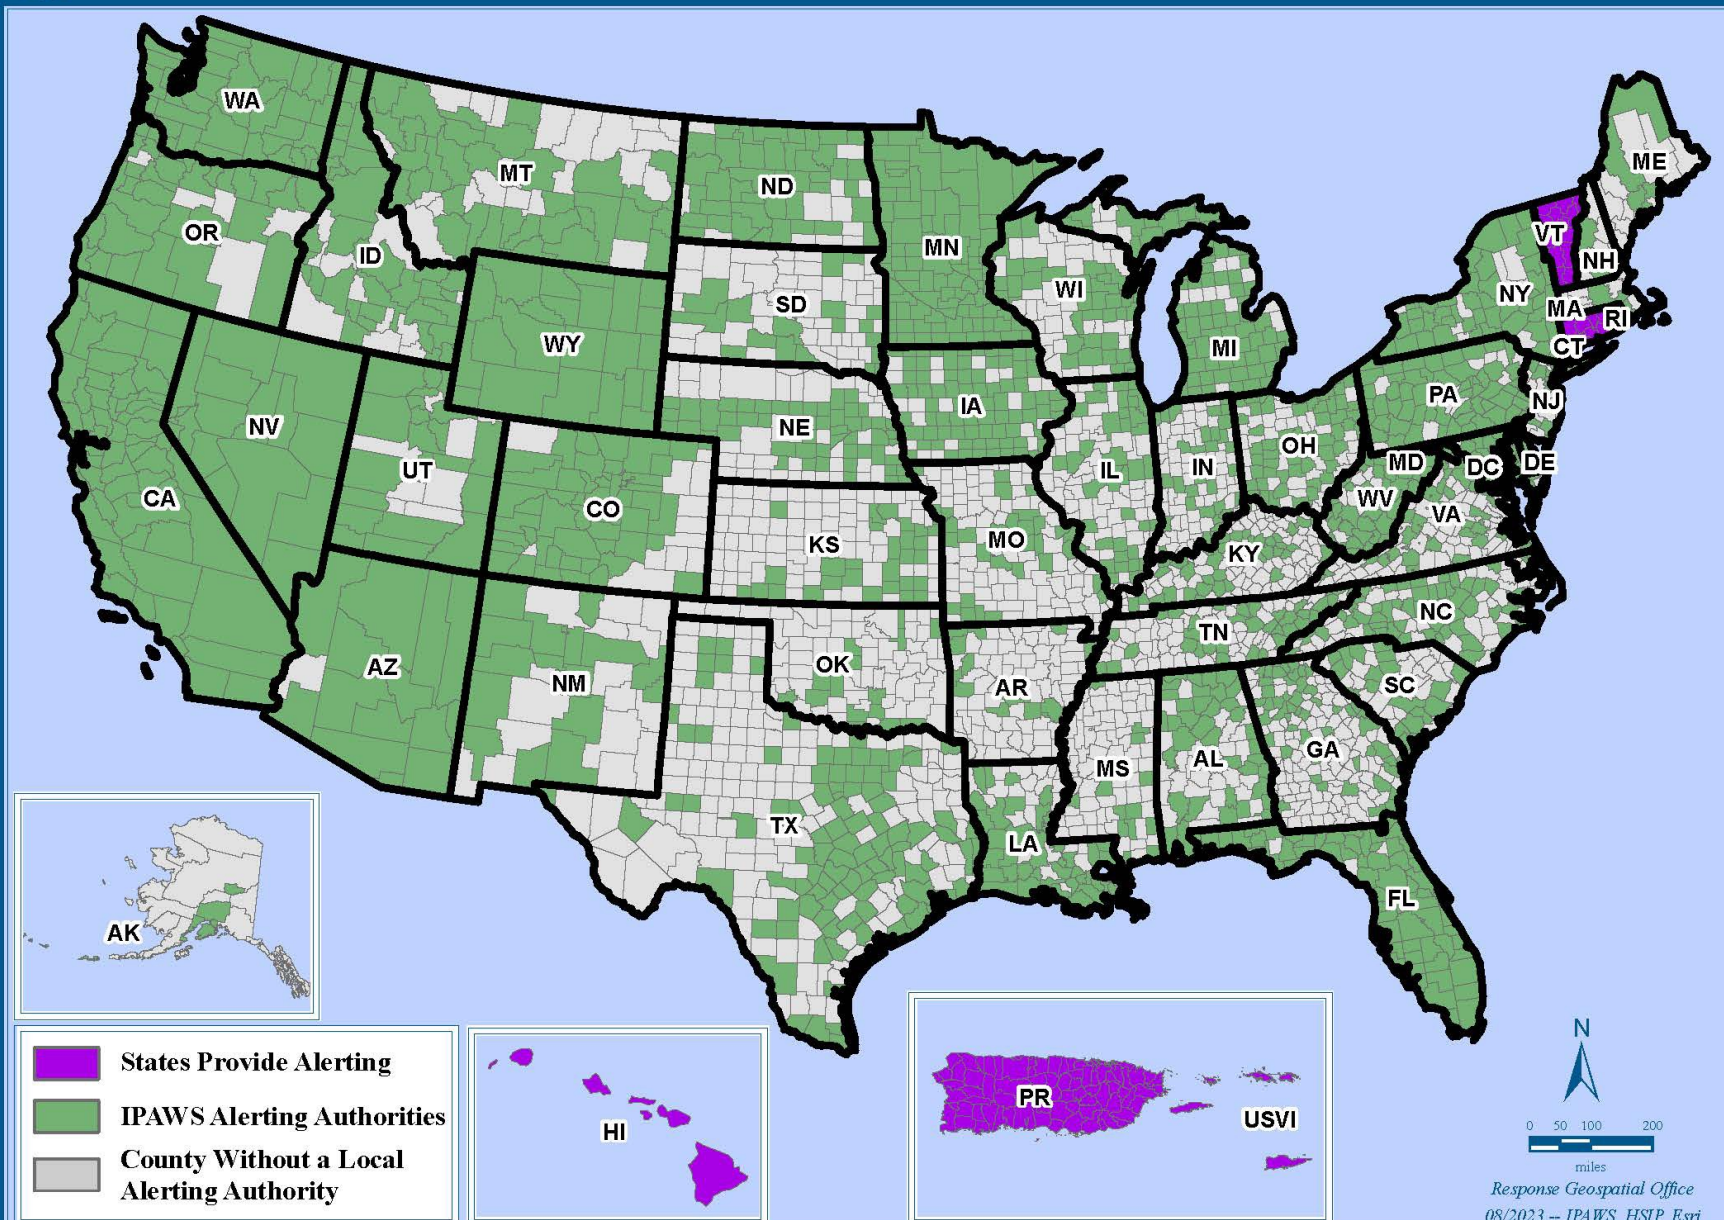

FEMA

FEMA

IPAWS Adoption by County (As of August, 2023)

When is IPAWS used?

Whenever the local alerting authority decides IPAWS is the best way to communicate public safety information to the public

- Evacuations
- Missing and endangered people
- Child Abductions/AMBER
- Water Contamination
- Water and Relief Supply Distribution
- Large Power Outages
- Toxic Plumes
- Volcano
- Shelter-In-Place
- Clear-all
- Disaster Resources
- Wildfires
- Dam Failures
- Chemical Spills
- Law Enforcement Situations
- 911 Outages
- Nuclear Accidents
- Road Outages/Closures
- Flash Flooding
- Snowstorms

FEMA

Alert & Warning Systems

IPAWS:

- No “sign-up” required to receive alerts
- Alerts broadcasts to all devices in a geographic area
- Alert delivery not affected by network congestion
- No delivery status or feedback

Mass Notification System:

- Require people to subscribe, opt-in, or install app to receive alerts
- Offer variety of notification methods
 - reverse phone dialing
 - social media integration
 - directed/limited distribution lists
- Alert delivery status and feedback

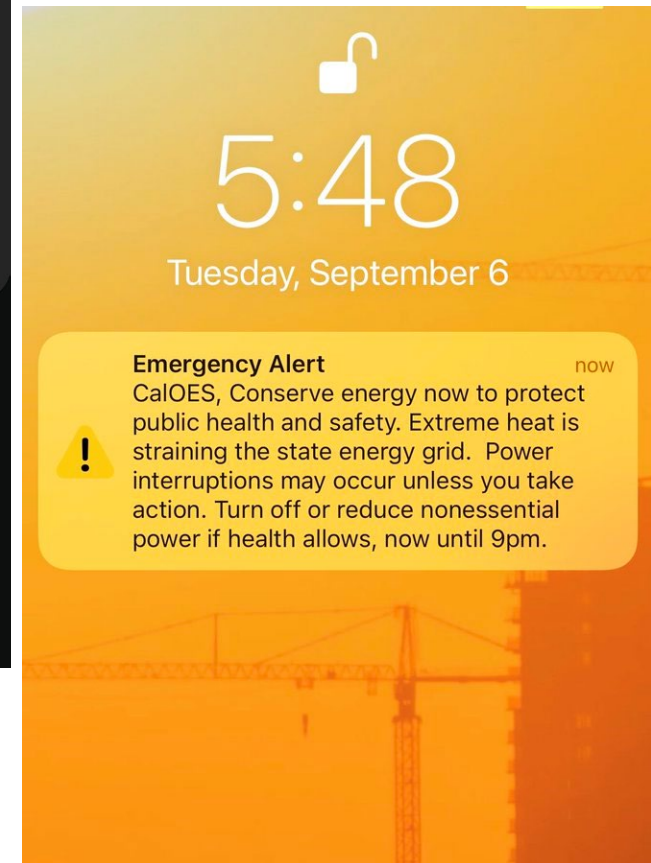

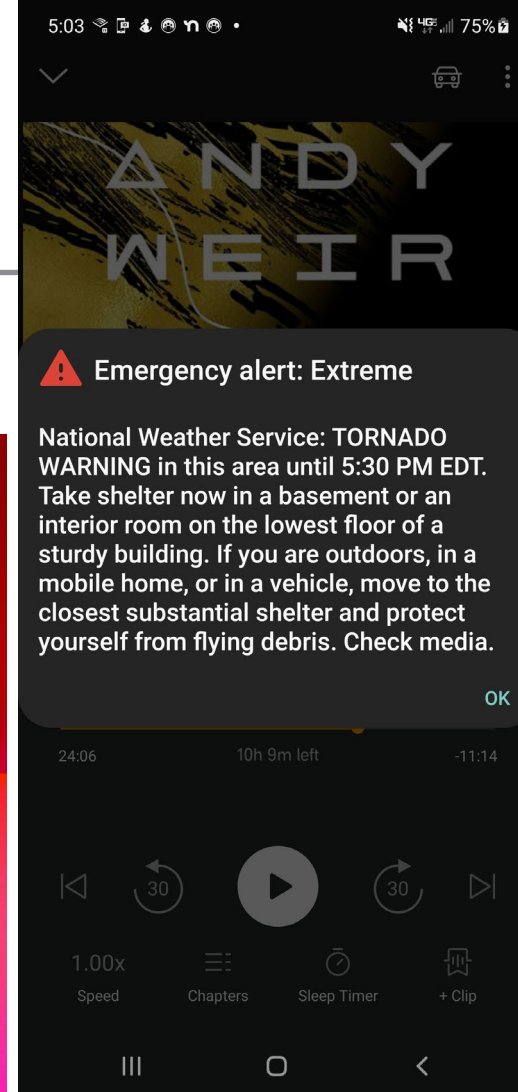

FEMA

Wireless Emergency Alerts

- Reach visitors/tourists
- English & Spanish
- Not SMS text message
- No network congestion
- All major providers participate
- Fast delivery
- Attention grabbing tone
- Sent to a specific geographic area
- Can contain links
- Up to 360 characters

FEMA

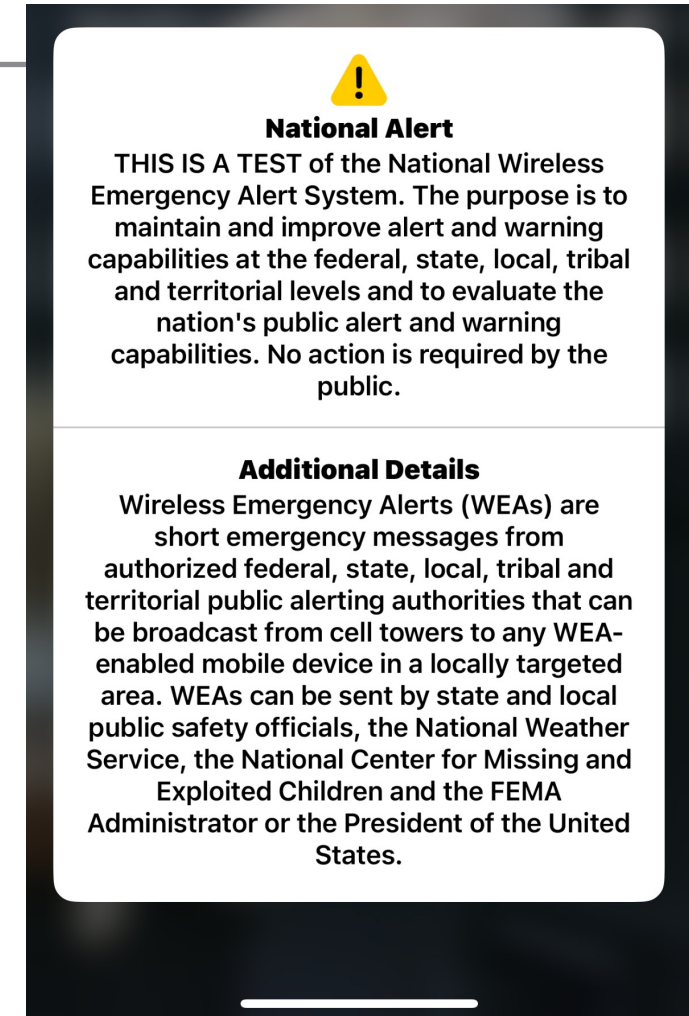

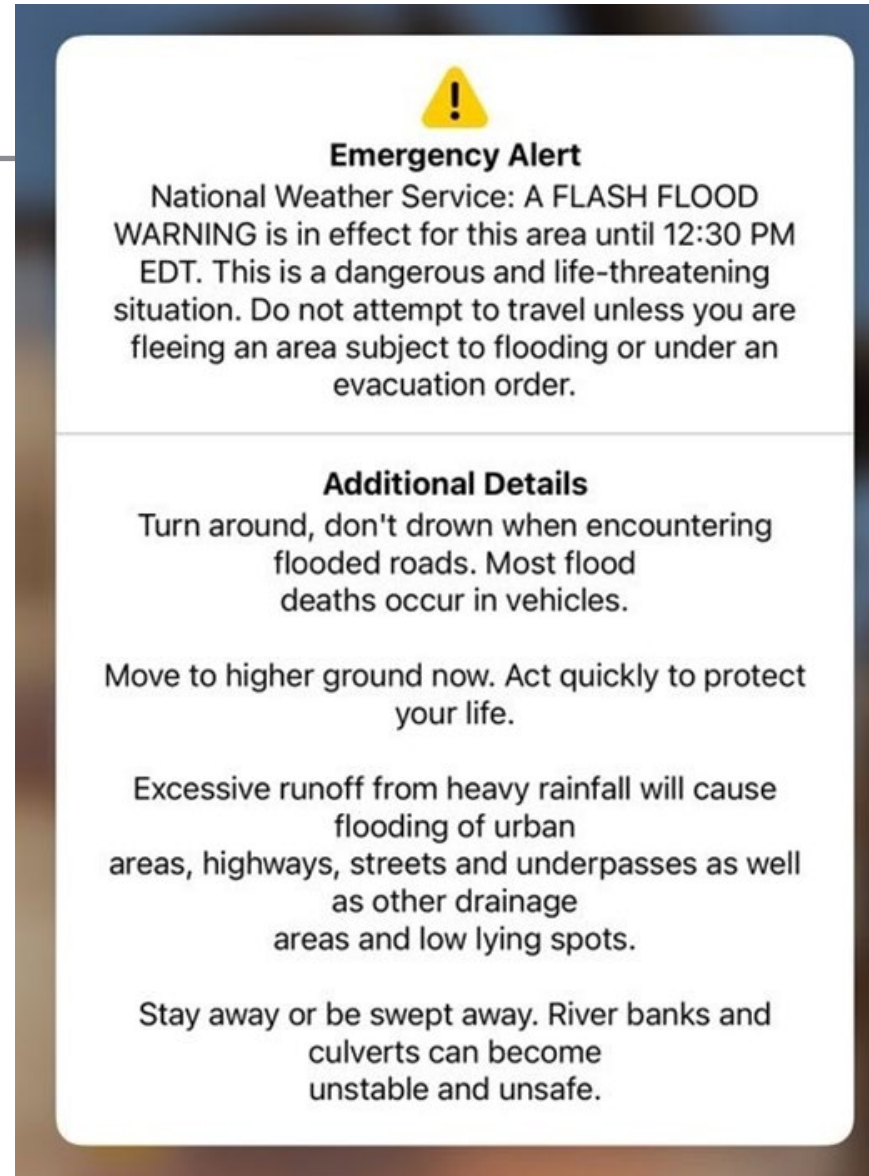

Apple iOS 17 Update

- 600 additional characters
 - Tap the alert to retrieve additional information

FEMA

WEA 360 Character Template

WEA 360 Character Guidance

- Recommended
- Provides more information to public
- Keep in mind non-locals will receive WEA – do not abbreviate or use acronyms that locals only understand
- Include in message:
 - Source
 - Description of event
 - Location
 - Action to take
 - URL or phone number to direct people to more information
 - Tiny URL services save space and can link to social media sites for info, pictures, maps, etc.

FEMA

Template

(1) [local, familiar, authoritative message source]. (2) [description of threat or event] in (3) [location and consequences]. (4) [Protective Action]. (5) [URL, phone number, media for more information]

Example – 291 characters

(1) DC Emergency Management notification. (2) Suspicious package at Washington Monument. Police activity in surrounding area (3) near 15th and 17th streets. Possible hazardous material. (4) Avoid area, stay indoors and away from windows. (5) Go to bit.ly/XXXX or tune to local media for more information.

Connected Pathways

- Emergency Alert System (EAS)
- NOAA Weather Radio
- Potential for any internet connect device or service

A civil authority has issued
A CHILD ABDUCTION EMERGENCY
for the following counties
or areas:
West Virginia;
at 6:01 AM
on DEC 14, 2022
Effective until 6:01 PM.
Message from IPAWSCAP.
Amber Alert: Ona, WV,
1/2

FEMA

FEMA's Guide for Alerts & Warnings

https://www.ready.gov/sites/default/files/2022-02/fema_guide-for-alerts-and-warnings_2021.pdf.pdf

- Information about 17 hazards and the protective actions people can take when they receive an alert

FEMA

Symbols

- Standardized symbols for event codes **optimize message content**
- Aid in making public alerts & warnings **more effective for:**
 - People with disabilities
 - People with Limited English Proficiency
 - Whole Community
- Apply a **common language for communicating incident information**
 - Used in local/state emergency management decision support tools
 - Geo-Targeting alert and warning message distribution within your systems

IPAWS National Test - 2023

*FCC = Federal Communications
Commission
ETRS = EAS Test Reporting System*

On October 4, 2023, IPAWS conducted the seventh IPAWS National Test. Sending the **WEA test message** began at 2:18 p.m. EDT. The **EAS message** was sent at 2:20 p.m. EDT.

What did we test?

The 2023 IPAWS National Test evaluated **CAP-formatted EAS alerts and WEAs** using the EAN “Imminent Threat” Event Code for WEA and NPT for EAS. This read as National Alert on phones.

Who received the test?

The WEA portion of this test reached nearly **all cellphones** that were **turned-on and within range** of a participating cellular service.

Activities:

Before: Development of Test Implementation Guide, Test Execution Planning

Test Execution

After: EAS Participants were required to submit responses to the FCC’s ETRS (EAS Test Reporting System)

The 2023 IPAWS National Test on October 4 tested WEA and EAS and reached nearly everyone in the U.S. at the time of the test.

Accessibility of National Test

FEMA IPAWS **continues to enhance accessibility with public alert and warnings.**

Initiatives to enhance accessibility for National testing include:

- ✓ Special alert tones for the Emergency Alert System and Wireless Emergency Alerts to improve accessibility for the hearing impaired.
- ✓ For WEAs, IPAWS also uses a special vibration cadence.
- ✓ IPAWS supports alerts being sent in both English and Spanish.
- ✓ WEA vibration cadence must have temporal tone that must be repeated twice. The vibration cadence must be restricted to use for Alert Messages (§ 10.530).

- ✓ When internet connectivity is available, IPAWS can provide emergency message content in multiple languages, if provided by the alert originator, for connected private sector systems that ultimately deliver the messages to people.
- ✓ The visual message portion of an EAS must be displayed at the top of the television screen and in a manner that is readily readable and understandable (§ 11.51).

The 2023 IPAWS National Test was available in both English and Spanish. Both the WEA and EAS portions used special tones to improve accessibility for the hearing impaired and the WEA portion used a special vibration cadence.

Colorado Inclusive Emergency Alerting Systems

FINAL REPORT

Inclusive Emergency Alerts for Colorado: An Assessment and Recommendations for Language and Disability Considerations

University of Colorado
Boulder

January 2024

- Finding 1. Colorado's alert systems and processes are a patchwork that, while flexible, makes it challenging to provide consistent and accessible emergency alerts.
- Finding 2. Colorado relies heavily on opt-in emergency alert systems but most localities report opt-in rates below 40%. These systems create barriers for everyone, but especially those who don't speak English or who have disabilities. Tracking alert subscribers and measuring the efficacy of alerts is a challenge.
- Finding 3. Given resource constraints, alerting authorities turn to resources that are available to provide alerts in other languages, but they may not align with best practices.
- Finding 4. Many emergency response personnel are interested in incorporating systems and practices that would make alerts more inclusive, but need more guidance, funding, and personnel to adequately do so.
- Finding 5. Technical and practical limitations of emergency alerts hinder most people and compound the challenges faced by those with disabilities and populations with LEP. These include delays in technology upgrades and pushback from private industry, among others.

Disability intersects every demographic group—there are people with disabilities of all ages, races, genders or national origin. And, disabilities can impact a person in a variety of ways—both visible and invisible. For people with disabilities and their families, it is important to consider individual circumstances and needs to effectively prepare for emergencies and disasters.
